Each One Teach One

Cracking the Math Code Clinic

...a partnership with Grand Hank Productions, Inc. to conduct weekly Hands-On Math Clinics for middle school students at Vare and Peirce Middle Schools.

This series of interactive math workshops is designed in collaboration with Universal Companies as an integral part of a comprehensive intervention program for students.

Sessions will focus on real world connections and techniques that enrich and enhance the understanding and application of math knowledge and promote higher order thinking. These student workshops will emphasize problem solving using math terms, concepts and skills related to measurement, fractions, decimals, percentages and geometry.

Tyraine Ragsdale, of Grand Hank Productions is a trained scientist and co-writer of the new "Science Core Curriculum" for the School District of Philadelphia. Ragsdale knows the power of a solid foundation in mathematics as a critical element in the capacity of students to think critically and at high levels of academic proficiency. Clinics will start in mid-January and continue until March.
